## WELLNESS PROFILE

The human body is designed to be healthy. The primary system in the body which coordinates health and function is the nervous system. Your nervous system is surrounded and protected by the bones of the spine called the **vertebrae**. Many of the common health challenges that adults experience have their origins during the **developmental years**, some starting at birth. Layers of damage to the spine and **nervous system** occur as a result of various **traumas, toxins, and emotional stress**. The result may be misalignment to the spinal column and damage to the nervous system - a condition called **Vertebral Subluxation**. Please answer the following questions to give us a better understanding about your child's state of wellness and factors which may be contributing to vertebral subluxation and impeding your child's **ability to heal**.
